Your information will be encrypted from the moment you enter it, and your sensitive information will not be saved on a public server. That means that information passed between you and our Website cannot be read in the event someone else intercepts it. The SSL technology provides an authentication that assures your browser that your data is being sent to the correct secure computer server; an encryption that encodes all data, so only the secure server is able to read it; and a data integrity that checks that the transferred data has not been altered.
